Visual Supports for Students with Autism

Dr. Nicole Caldwell &
Cheryl Stewart M.Ed. CCC-SLP

What are visual supports?

- A visual support is a visual item (such as a picture or video) used to communicate with a person who has challenges with using or understanding language.
- Examples of visual supports include videos, photos, drawings, objects, written words, or lists.

Autism Speaks (n.d.).

Visual Supports
are for everyone

What visual supports
do you use in your life?

Outline: Visual Supports for Learning

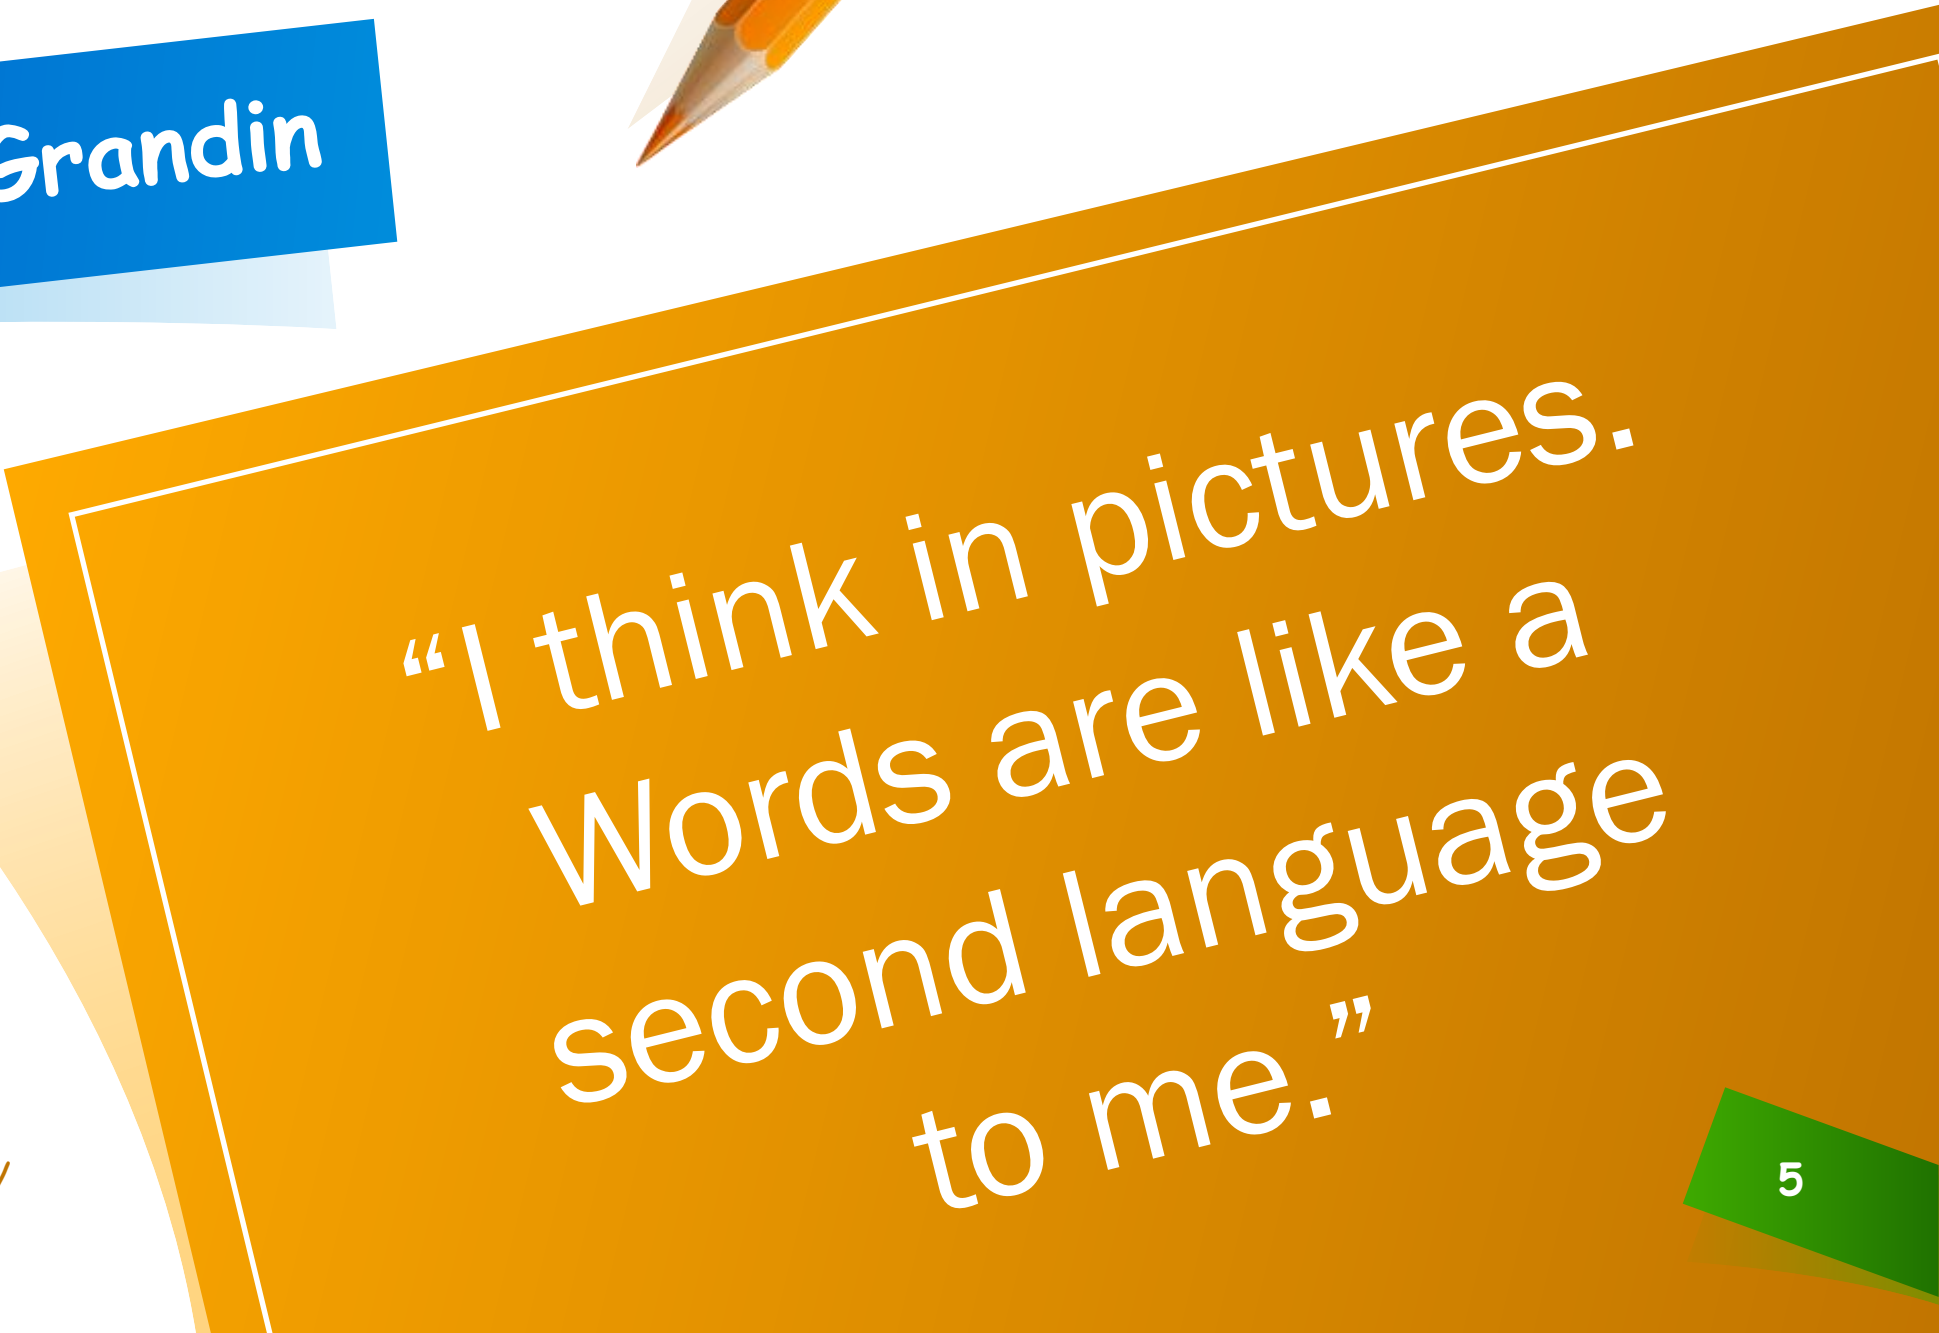

- What are visual supports for academics?
- Why are they helpful for students with autism?
- What is the research base for visual supports?
- How can you use visual supports to teach academics?

Dr. Temple Grandin

“I think in pictures.
Words are like a
second language
to me.”

Source:
[https://www.grandin.com/
inc/visual.thinking.html](https://www.grandin.com/inc/visual.thinking.html)

Why are visual supports helpful?

- Students with autism experience challenges in language and communication (Rao & Gage, 2006).
- They also may experience difficulty in language processing (Rao & Gage, 2006).
- Students with autism may process auditory information more slowly than neurotypical students (Cashin & Baker, 2009).
- However, these students may show increased perceptual functioning when they process information visually (Samson, Motttron, Soulières, & Zeffiro, 2012).

Research Base for Visual Supports

- Visual supports meet the criteria to be considered an evidence-based teaching practice for early childhood, elementary, and middle school students (Hume, 2008).
- Specific visual support examples:
 - Activity schedules are considered an effective teaching practice to help students with autism with a variety of academic and vocational skills, as well as increasing independence with performing sequences or steps in a process (Association for Science in Autism Treatment, n.d.)
 - Schedules are also considered an established teaching practice (Autism National Standards Report, 2015).
 - Modeling and video modeling are considered an established teaching practice for ages 3 - 18 years for academics, communication, interpersonal skills, reduction of problem behaviors, and sensory/emotional regulation (NAC Report, 2015).

Visual Support Examples

Picture Schedules

- Depicts a sequence of events or steps in a task that the student will complete.
- Can be made with photos or drawings.
- Good for:
 - Routines, such as getting ready for school.
 - A school schedule.
 - A sequence of tasks to complete in class.

Visual Support Examples

Picture Schedules

How to Start Using a Picture Schedule:
First-Then Chart

Stage 1: Two Preferred Activities

Stage 2: One short, less preferred activity followed by a preferred activity.

Stage 3: One less preferred activity followed by a preferred activity.

Stage 3: One less preferred activity followed by a preferred activity.

Picture Schedules

Picture Schedules

Visual Support Examples

Written Schedules

- Lists a sequence of events or steps in a task that the student will complete.
- Can be made with typed or handwritten.
- Good for:
 - Routines, such as getting ready for school.
 - A school schedule.
 - A sequence of tasks to complete in class.
- Additional links/examples in handout.

Written Schedules

Visual Support Examples

Picture Instructions

- Shows sequence of steps in a single process.
- Example: picture recipes.
- Use with a task analysis.
- Another example here:
<https://www.autismhomeschoolsuccess.com/single-post/2019/07/03/A-Visual-Schedule-for-How-to-Remove-a-Flash-Drive-from-a-Computer>

Visual Support Examples

Written Instructions

- Many of my students do better with visual processing, so it may help if I write down what they need to do.
- This can be instead of telling them out loud or in addition to verbally telling them.

Visual Support Examples

Video Modeling

- Using video technology to provide a visual model of a skill or behavior (Cox & AFIRM Team, 2018).
- Video demonstration of a skill or behavior.
- Example: video photography tutorials.
- For more info, see this video in my Facebook group:
<https://www.facebook.com/AutismHomeschoolSuccess/videos/292265898126835/>

Visual Support Examples

Activities with Direct Matching

- I use activities like these folder games, where the student matches things one-to-one.
- In this game, the hearts in the folder have the answers and the student puts the heart with the math problem that has that answer on the folder with Velcro.
- This allows the student to clearly see what to do and when the activity is over (all hearts are matched).

Visual Support Examples

Independent Work Stations

- A visual set-up that allows the student to work independently.
- Use prompting/prompt fading at first.
- All activities should be ones the student can do independently, like the folder games on the previous slide.

Visual Support Examples

Graphic Organizers

- A teaching tool that helps students make pictures or visual connections of knowledge, thoughts, and information.
- Example here:
<https://www.autismhomeschoolsuccess.com/single-post/2019/12/10/Using-Story-Maps-for-Reading-Comprehension>
- More examples: <https://www.understood.org/en/school-learning/learning-at-home/encouraging-reading-writing/graphic-organizers-for-reading>

The image shows a story map graphic organizer template. It is a white sheet with a yellow border, tilted slightly to the right. At the top, there are two boxes: 'Characters Who is in the story?' on the left and 'Setting Where does the story take place?' on the right. Below these are three large rectangular boxes arranged vertically, labeled 'Beginning', 'Middle', and 'End' on their left sides. Arrows point from the 'Beginning' box to the 'Middle' box, and from the 'Middle' box to the 'End' box. There are small house icons in the bottom right corner of the 'Setting' box and the 'Beginning' box.

Visual Support Examples

Visual Prompts

- Make the activity clear to the student.
- A non-verbal cue that shows the student what to do or what a correct answer is.
- You can see prompt fading in this example.
- More info here:
<https://www.autismhomeschoolsuccess.com/single-post/2019/07/20/My-Favorite-Way-to-Practice-Spelling-Words>

Visual Support Examples

Visual Prompts

- Can also show a student what to say in a situation.
- Another example here:
<https://www.autismhomeschoolsuccess.com/single-post/2019/08/21/Increasing-Independence-with-Written-Prompts>

Key Tips for Using Visuals

Visuals need to be:

- Simple
- Uncluttered
- Straightforward
- Easily recognized
- Easily understood
- Universally Understood

Who to use visuals with

- Students on the autism spectrum
- Students with auditory processing difficulties
- Students with ADHD
- Both students who are non or low verbal, AND students who are verbal

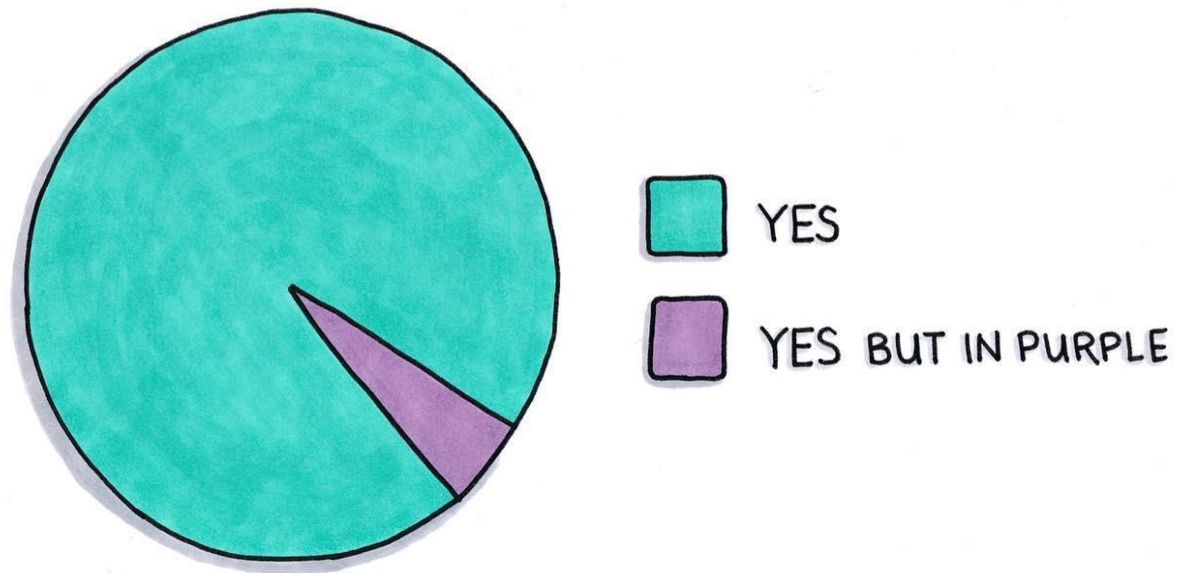

Tip: Do not fade visuals as verbal skills improve,
but consider changing their form over time to match current skill level
(for example: from pictures to text)

VISUALS

@Kwiens62

MY STUDENT UNDERSTANDS EVERYTHING I SAY,
SHOULD I STILL USE VISUALS?

Using Visuals for Receptive Language/Communication

What kind of receptive language difficulties (understanding/comprehension) do people with Autism Spectrum Disorders (ASD) have?

- Auditory Attention: attending to auditory information
 - Auditory Synthesis: once information is heard, processing what the information means
 - Auditory Discrimination: hearing and understanding in the presence of noise
-
- Note: all of these things are also common in people with ADHD

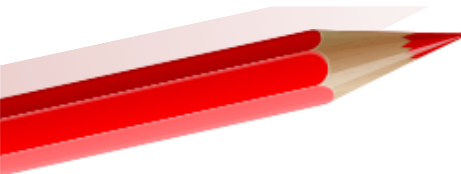

<https://www.autismspeaks.org/expert-opinion/autism-and-auditory-processing-disorder-whats-connection>

Auditory Attention

People with ASD have difficulty with attending to auditory information, as well as with shifting and re-establishing their attention

Information that is presented auditorily, due to its transient nature, may not be processed because they were not able to maintain auditory attention

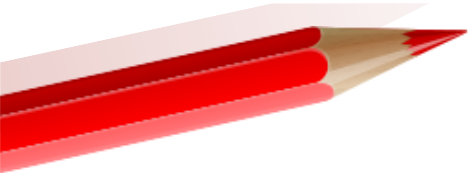

Auditory Synthesis

The length of the message often correlates to difficulties with correctly understanding what was said: in longer messages a person with ASD often hears only the last part of the message:

For example: I do not want you to give the dog your hamburger

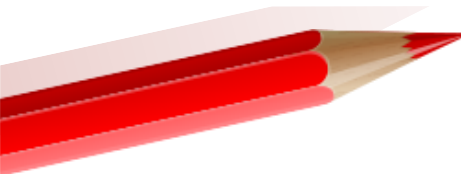

May be processed as: give the dog your hamburger

Auditory Discrimination

People with ASD often have difficulty understanding verbal speech when there is any type of background noise

I need to...

~~talk more~~
~~talk louder~~
~~talk closer~~
~~talk slower~~

...use visuals

@kwiens62

Using Visuals to help with Expressive Language

- Visuals can be used to increase expressive language skills in both people who are non-verbal and those who have verbal skills
- Visuals can serve as reminders (cues) to a person about the word they want to use
- Visuals can serve as reminders (cues) to a person about the word order for what they want to express
- Visual supports for expressive language decrease the cognitive load for verbalization and allow the individual to focus on talking

Types of Visuals: Expressive Language

- Low-Tech (No Tech) - no voice output
 - High Tech: Voice Output

Low Tech Visuals

- Any of the previously mentioned types of visuals can also be used as tools to help with expressive language
- In particular, choice boards and environmental labels can increase the ability of a person to express themselves verbally or by using the visual
- Individuals can use the visual tools by pointing to pictures/words that are available to express the word

Using Low Tech Visuals

Individuals can use the visual tools by:

- Pointing to pictures/words that are available to express the word
- Handing the visual to their communication partner
- Using eye gaze to look at the visual

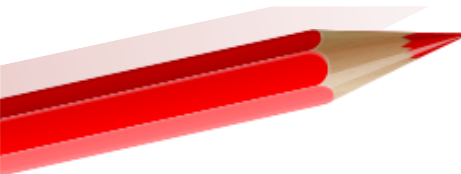

Choice Boards/Books

Low Tech Visuals:Core Communication Boards/Book

A core vocabulary communication board or book is a communication system that is comprised of a combination of frequently occurring vocabulary words that occur in a wide variety of communication environments

Low Tech Visuals:Core Communication Boards/Book

<https://ttaonline.org/Online-Training/MLbTE3FyBnEj-DeYNo4LcaM9cSEAJzBI/Online-Training-a-few-good-words-using-core-vocabulary-to-support-nonverbal-students>

PODD = Pragmatic Organization Dynamic Display

PODD stands for:

Pragmatic - realistic social language.

Organization - words and symbols arranged in a systematic way.

Dynamic Display - changing pages

Low Tech Visuals: PODD Book

High Tech

High Tech Visual use is typically done with a communication device that is either a dedicated communication device or an iPad with a communication app

Free High Tech Communication Apps

Go Talk Now Lite

Recommended materials to start with

- White Boards and dry erase markers
 - Small 3 ring notepads
 - Sticky notes
 - Magnets (esp. clip magnets)
- Clear photo frames with magnet strip on back
 - 3 ring binder with pocket protectors
 - Velcro (Always Velcro!!!!)
 - Small photo book
- Fishing tackle box or craft box to store pictures
- Drawing and/or whiteboard apps on phones/tablets

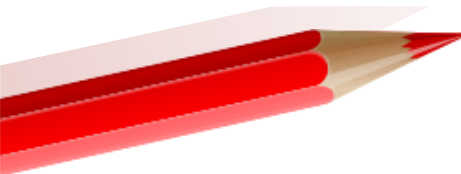

Symbol Set Subscription Options

Lesson Pix:

<https://lessonpix.com/>

- Over 40,000 Scalable Images
 - Only \$36.00/year
- 

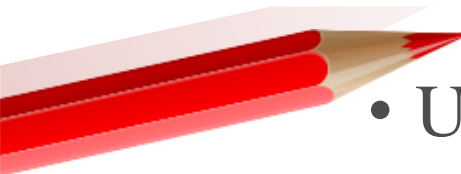

Symbol Set Subscription Options

Symbolstix

<https://www.n2y.com/symbolstix-prime/>

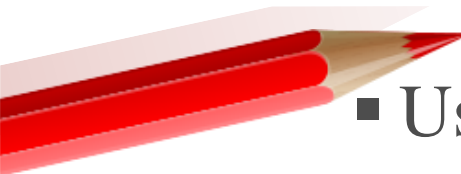

- 
- A stylized red pencil with a white eraser and a sharp lead tip, pointing to the right.
- \$99.00 a year
 - 60,000 symbols
 - Used on popular communication apps like Proloquo2go and TouchChat

Symbol Set Subscription Options

Boardmaker Online

<https://goboardmaker.com/pages/boardmaker-online-personal>

- 
- \$99.00 a year
 - 30,000 symbols
 - Used on popular communication apps such as Snap Core and Communicator 5

Picking your symbol set

- Don't spend too much time on this!
- Use what you can, when you can
- Symbol sets can be mixed and matched
- Try to be consistent with symbols but remember something is better than nothing

Take Away Tips for Home Implementation

- Keep it simple: the simpler it is, the more likely you are to use it
- Something is better than nothing: don't wait for perfection or until you are home to print something out
 - Drawing stick figures and close approximations is OK
 - Carry sticky note pad and a couple pens for quick draws
- Don't overwhelm yourself: start with one thing, integrate it into your daily life for 2-4 weeks, then add another thing

vis·u·als

/ˈvɪzH(ə)w)əls/

noun

A simple, convenient
alternative to repeating
yourself all day.

@kwiens62

Consider making a visual for anything that you
find yourself repeating throughout the day.
Also make a visual for any question that a student repeatedly ask you: "What's next?"
If students are asking you to repeat the same information all the time,
visuals can supply the information to them in a more permanent manner.

Visit northstarpaths.com for free posters about visuals and to follow our blog.

Visual Implementation is a journey, not a race
