Site Plans

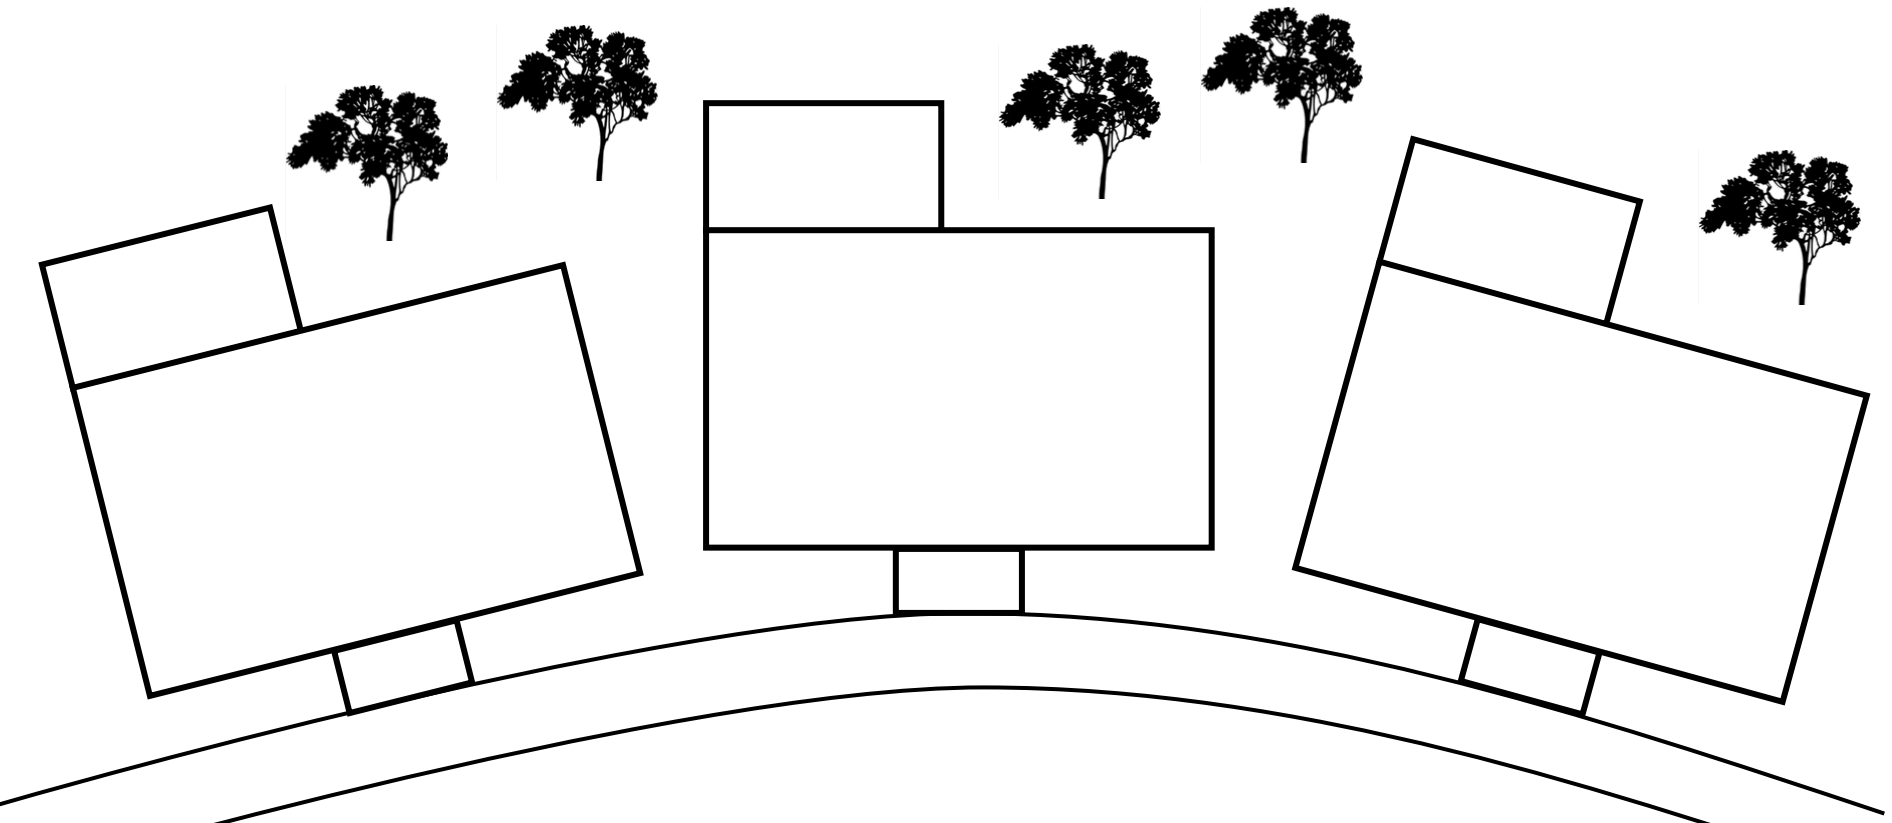

What is a Site Plan?

A site plan is like a map of a neighborhood or shopping center. The site plan will often show information like buildings, roads, landscaping, and lots.

On the site plan, an architect draws a square or other shape to represent each house, building, road, driveway, yard, tree, park, pond or lake, sewer, and power line.

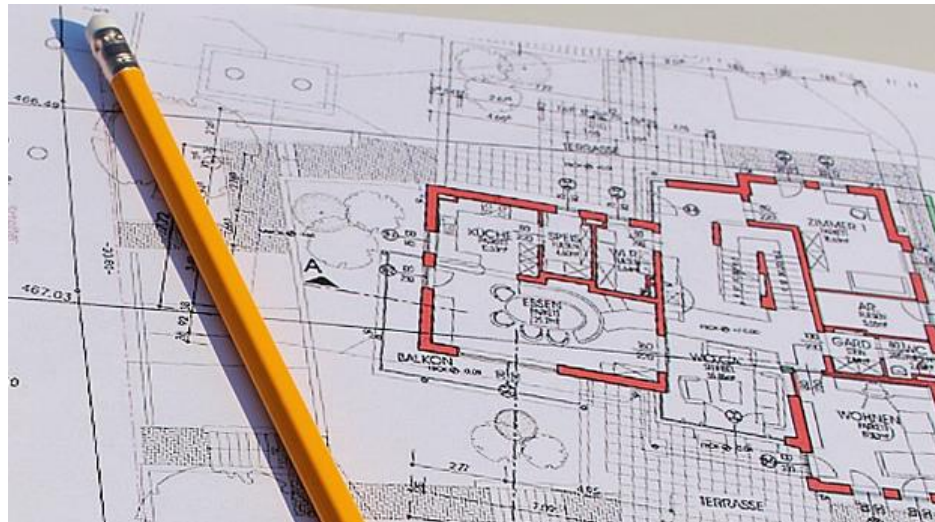

A Site Plan is Like a Blueprint or a Floor Plan

A blueprint or floor plan shows the inside of a building or apartment. It is like a map of the inside of a house, office building, apartment, or other building.

Why Are Site Plans Made?

A site plan shows where to build the buildings, roads, and landscaping. An architect will draw a site plan to get permission to build the neighborhood or shopping center.

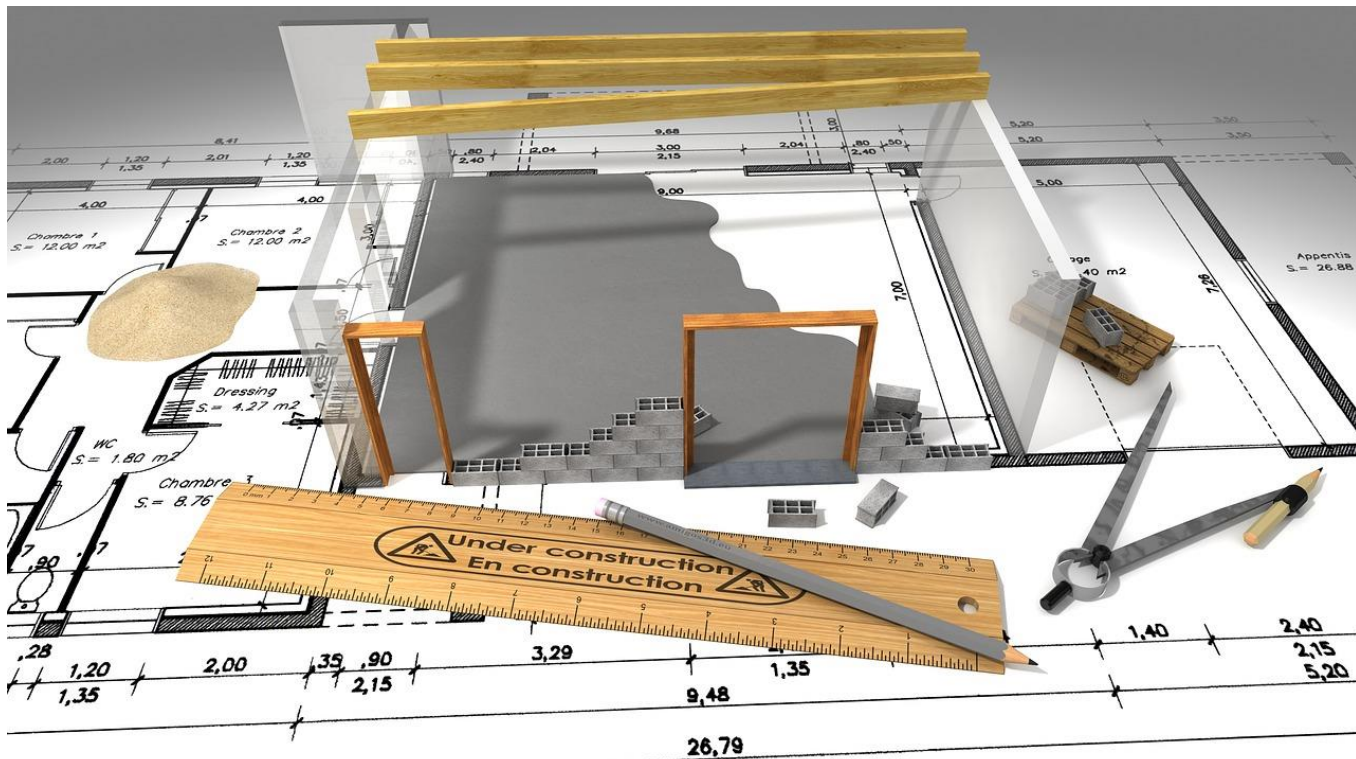

After getting permission to build, the site plan is also used for construction.

Since the site plan is like map, it shows the construction workers where to build everything.

If you're interested in architecture and building design, it is helpful to learn about site plans.
